View Discussion Improve Article Save Article Like Article ReadDiscussView Discussion Improve Article Save Article Like Article JSON is also known as (JavaScript Object Notation) is a format to exchange the data from the server. The data stored in JSON format is lightweight and easy to handle. With the help of JSON, we can access the data in the form of jsonArray, jsonObject, and jsonString. In this article, we will specifically take a look at the implementation of jsonObject using the Retrofit library in Android. Note: To parse JSON object in android using Volley library please refer to JSON Parsing in Android using Volley LibraryJSON Object: Json Object can be easily identified with “{” braces opening and ”}” braces closing. We can fetch data from JSON objects with their key value. From that key, we can access the value of that key. We will be building a simple application in which we will display a simple CardView in which we will display a single course that is available on Geeks for Geeks. A sample video is given below to get an idea about what we are going to do in this article. Note that we are going to implement this project using the Java language. is the JSON object from which we will be displaying the data in our Android App. { “courseName”:”Fork CPP”, “courseimg”: “🔗”, “courseMode”:”Online Batch”, “courseTracks”:”6 Tracks”}Step by Step ImplementationStep 1: Create a New ProjectTo create a new project in Android Studio please refer to How to Create/Start a New Project in Android Studio. Note that select Java as the programming language.Step 2: Add the below dependency in your build.gradle fileBelow is the dependency for Volley which we will be using to get the data from API. For adding this dependency navigate to the app > Gradle Scripts > build.gradle(app) and add the below dependency in the dependencies section. We have used the Picasso dependency for image loading from the URL. // below dependency for using retrofit.implementation ‘com.squareup.retrofit2:retrofit:2.9.0’implementation ‘com.squareup.retrofit2:converter-gson:2.5.0’// below dependency for using picasso image loading libraryimplementation ‘com.squareup.picasso:picasso:2.71828’After adding this dependency sync your project and now move towards the AndroidManifest.xml fileNavigate to the app > AndroidManifest.xml and add the below code to it. Step 4: Working with the activity\_main.xml fileNavigate to the app > res > layout > activity\_main.xml and add the below code to that file. Below is the code for the activity\_main.xml file.
