We are almost sorry for making holes in Google Earth, but there have been some problems that occurred to us while we used it. To begin with, the Earth is not exactly fast. Now, considering the enormous work that the software has to do to get online satellite images, it's not a surprise, but nowadays we are used to speeding up online and wait longer long loading times can really put to the test our Patience. Another scam is that the controls are not always intuitive. Sometimes you will find yourself in front of a screen that looks like Street View and you will try to move how you would do with Maps, just to find out that it is a 360à " image from the You can just look around. Then you have to squeeze your eyes to all the icons to decide which is the next move. We are sure that with the passage of time you will become more familiar with commands, but for a first time time it was a bit frustrating. Finally, it is difficult to make a call for how much time Google Earth will entertain you. It is very fresh and perfect for while an hour or two occasionally, but it does not seem likely that the program will keep you back unless you are using for a very specific purpose. There are a number of applications and map tools that imitate some of the features of Google Earth, but no one we know how to get closer to approximate Google Earth as an interactive globe. 3D. Google Earth is a truly incredible software, but there are some niggles that make it a little less than stellar. We liked to interact with it and using the Voyager section to try to find out something new, but it seems unlikely that you continue to go back to it or use it more frequently. For all its technological and cool features, we cannot help to think that it is a bit like an old, offline world. Of course, you could use it for a project, or give it a rotation of the liquid every now and then but, in general, spends most of its time in a corner, collecting dust. Download it? Google Earth is free and a really easy tool to immerse inside and out, so sure, give it a vortex. For most users, access via a browser will be more than enough.
