Go to brave browser r/brave browser • I keep removing the "Brave VPN Wireguard service" manually, and I deleted the auto-update services too, yet somehow the browser continues to update itself silently, reinstalling a VPN service that I didn't want nor ask for. Before I uninstall this browser for good, is there any way I can stop this from happening? New to Reddit? Create your account and connect with a world of communities. Go to browsers r/browsers • i'd like to know which browser works best for a low-end laptop? New to Reddit? Create your account and connect with a world of communities. It's just unusable: even with the best effort of turning off the home page and getting Premium, you still get hit with search bar suggestions and playback recommendations that now take up half the vertical viewing screen Full of distractions and advertisements, gotta use two or three Chrome extensions on desktop even to make it feel like a tool [UPDATED 10 September 2022] I revised what I wrote in the post and removed the HTML5 Test, which is a notoriously poor benchmark. I just reinstalled Windows completely, so I might want to test these browsers again to benchmark them and get pumped about new ones, I suppose. [UPDATED 11 October 2021] I also include the Chalkboard benchmark from Microsoft and Stylebench Today is October 10, 2021, the day of my Brave browser benchmarking, and we'll see how these three browsers fare. 7 benchmarks were used: Basemark 3.0, Octane, MotionMark, CSS3Test, HTML5 test(Outdated and Not Recommended Benchmark), Chalkboard and Stylebench. At last, I also compare RAM and CPU use. I constructed the benchmark out of curiosity, and so may have made some mistakes; moreover, there are alternative benchmark tests that I did not include, such as JetStream or Speedometer. Bear in mind that I benchmarked Edge and Firefox yesterday, 9 October 2021, since I did not have time to benchmark Brave, except to recheck the RAM and CPU use in these three browsers today. There have been some individuals comparing Brave to Edge, and I've found that Brave routinely scores worse than Edge and Chrome, thus I'm not persuaded by those benchmarkers. That is why I intend to put myself to the test. Setup Specification Details GPU GTX 1650 with NVIDIA driver 471.96 CPU R5 3500X (It's a Chinese brand) DRIVE 512GB SATA DRIVE 500MB/S RAM 16GB Operating System Windows 11 OS Build 22471.1000 (Dev Insiders) Not recommended for daily use I reinstalled these three browsers with default settings and just added two extensions: Page load time and UBlock Origin, which is likewise deactivated in Incognito mode . I don't install UBO extension on Brave since they have their built in ad/tracker blocker. I use default Shield settings, which is Standard mode. I'm going to activate these two extensions( Again, I haven't installed UBO for Brave) for memory and CPU utilization testing. I used the most latest versions of Edge 94.0.992.38, Firefox 93 and Brave 1.30.87 . All the test I did is higher score = better except css3 test time taken(ms) and RAM & CPU use. Results Test #1: Basemark 3.0 Basemark Web 3.0 is a benchmarking tool that utilizes multiple tests to gauge browser performance including WebGL tests, SVG tests, stress tests, and more (20 tests in total). I'm surprised at first to see that Brave have 500 point lower than Edge. So, I retest Brave again and got 5 point more. Brave Edge Firefox Test #2: MotionMark MotionMark is a graphics benchmark that throws a heap of different graphics at the browser to see how it handles them. Technically, it measures a browser's capability to animate complex scenes at a target frame rate. Brave Edge being the fastest in the test Firefox perform great too Test #3: Octane Octane 2.0 is a benchmark that measures a JavaScript engine's performance by running a suite of tests representative of certain use cases in JavaScript applications. Bravery! Edge the fastest! :) Firefox Test #4: CSS3 Test Brave - 66% 50ms Edge- 66% 51ms Firefox- 70% 64ms Test #5: HTML5 Test This test is acknowledged to be out of date and not up to modern standards. ~-The HTML5 test score is an indication of how well your browser supports the HTML5 standard and related specifications. Brave - 528 points Edge - 528 points Firefox - 517 points~- [ NEW ] Test #6 & #7: StyleBench and Chalkboard the Chalkboard benchmark from Microsoft and Stylebench . Stylebench is higher = better. As for Chalkboard is lower = better. I'm impressed that Firefox fastest in this test than any Chromium browser here. I also tested in my laptop for confirming these benchmark Browsers Stylebench Chalkboard Brave 30.34 ,16.4 score 15.72 , 29.97 sec Edge 39.3 , 29.3 score 12.8 , 32.55 sec Firefox 69.4 , 55.1 score 5.95 , 6.75 sec Last but not least, RAM Usage and CPU Usage Again, these two browsers operate in Incognito mode, but I've enabled UBO(except Brave) and page load time in both, since a considerable proportion of users really utilize UBO. I open over 13 tabs, which is two youtube.com , two reddit.com , androidpolice.com , androidcentral.com , pcgamer.com , microsoft.com , wikipedia.org , apple.com , samsung.com , two apkmirror.com , and lastly firefox.com in these 3 browsers . After I load all this website, I been idling over a minute and starting checkin the Task Manager. Firefox - 1.159MB with average 1-3% CPU usage Edge - 1.070MB with average 10-13% CPU Usage Brave - 1.432MB with average 15-20% CPU Usage Conclusion Concerning Brave, Brave looks to have substantially lower benchmark scores than Edge. I'm interested as to why Brave is touted as being quicker and more efficient than Chrome, while it is not( Brave utilize a much greater RAM and CPU than Edge and Firefox too). Additionally, Brave eats substantially more battery than Firefox as well! I've been using it for over two weeks and have had a generally favorable experience with the browser. Firefox routinely loads sites quicker than Edge and Brave, depending on the page load time addons/extension I've installed. For instance, roblox.com takes roughly 0.8 to 1 second to load, while Edge and Brave takes approximately 2-3 seconds. This also applies to androidpolice.com, youtube.com, and pcgamer.com and a lot more. Firefox has always loaded websites quicker than Edge and Brave at least on my PC although the smoothness may due of the scroll! The only issue I been having Firefox is their android app Personally, I use three browsers on a regular basis: Firefox, Brave, and Vivaldi! Vivaldi is the best browser I've ever used! Unlike Edge or Chrome, it has a plethora of features and functionality as well as balanced privacy. Their browsers lack ad-blocking and privacy capabilities. Nonetheless, it's a fantastic browser most of the time I'm trying to decide what to switch to as Chrome is unbearably slow, smoothness (both in browser d in terms of overall resource hogging) and cross-device syncing are important to me. I use Windows 10 and android, I forgot to mention that. Which would you recommend and why? EDIT: This is the conclusion I arrived at after my own research, if there are other recommendations I'd love to hear those as well. Go to browsers New to Reddit? Create your account and connect with a world of communities. Go to brave browser r/brave browser • I'm using Firefox right now. How good is Brave in terms of security and privacy compared to Firefox? Page 2 Go to brave browser r/brave browser r/brave browser La mejor privacidad online. Navega de forma privada. Busca de forma privada. Brave tiene la misión de arreglar la web dándole a los usuarios una experiencia de navegación más segura, rápida y privada, mientras apoya a los creadores de contenido a través de un nuevo ecosistema de recompensas basado en la atención. Disponible para Android, iOS, Windows, macOS y Linux. ¿Quieres ayudar a mejorar Brave? Próbala nuestra versión Beta: • Ahora estoy usando Firefox. ¿Qué tan bueno es Brave en términos de seguridad y privacidad comparado con Firefox?
