AssGuard is a new VPN platform that provides its services to various types of users, depending on their preferences and VPN requirements, to be access to geo-blocked content, to the stream, extra encryption, to block the Announcement, the online monitoring block, to mask IP addresses, masking IP address, additional security, and more. You can sign up for ASSGAURD VPN HERE. There are only two subscription options - 1 month for \$ 4.99 / month and 12 Months for \$ 4.99 / month (\$ 59.99 billed every 12 months). You can only pay through credit / debit cards, Google Play or Apple Pay. Assguard has a free 3-day trial and a 14-day reimbursement guarantee on Windows PC subscriptions purchased via Stripe (credit / debit cards). If you purchased via an App Store, you can request a refund and your own account, users can protect up to 6 devices simultaneously and can also manage them (Link / Spiano from your account) in the customer area on the Assguard website (Image Credit: Future). AlternativesSassGuard can have a nice presentation and good-looking applications, but has a lot of work to do before you can stay shoulder to shoulder with some of the main VPN today. For example, it is more expensive than cyberghost, surfshark or nordvpn, since all three offer longer subscriptions with more discounts, not to mention more advanced platforms. If, however, spend rather more money, but you take your hands on a really elite VPN service, then ExpressVPN should be your platform of choice. Today access today's popular streaming platforms can be a challenge in some regions, both in terms of specific libraries located or entirely. The assguard can break through these barriers and allow anyone, wherever looks independent content geographically on Netflix, BBC iPlayer, HBO, Disney +, and more, freely and firmly. As long as the app works for them. Autout The MacPaw Networks LLC company is the company that runs ASSGUARD VPN and is located in London, the United Kingdom. It provides access to a maximum of 50 servers in 15 countries, including in South Africa, Japan, Egypt, Australia, Israel, Georgia, and others (Image Credit: future). Privacy and Encryption Keep your sensitive data protected by spices, assGuard states that distributes the super-strong algorithm AES-256-CBC for OpenVPN connection". In addition, AES-256 / IPsec The encryers used to generate the Phase1 keys are AES-256-GCM for encryption, coupled with SHA2-384 to ensure integrity, combined with PFS (perfect secrecy forward) using the 3072-bit Diffie-Hellman keys. Traffic. Torrent and P2P are not only supported, but the platform also provides you with a torrenting option specializing with optimized P2P servers within the apps, to enable fast and protected files. Assert is a policy of the Zero logs - Ensure your activities while using your services AES-256-CBC "not monitored, registered, registered, stored or passed to any third party. It adds that it is not the store AES-256-CBC "Information on the conflict session, traffic registers, IP addresses or other data". However, collects a certain amount of information, including connection timestamps, your device ID, whether you have successfully established a VPN connection on a particular day, at which VPN position, and from which country / ISP, in order to provide technical support. Also aggregate the sum of the data transferred to detect suspicious behaviors, as well as "minimal use statistics" to maintain the quality of its service. SupportAssguard has simple and intuitive apps for iOS, Android and Windows, while one for Mac is currently in the works. The IOS app has a 4.2-star rating (out of 5) from 141 users. It was last updated on August 14th 2020, with some of connection stability and known problems corrections. The Android counterpart has a somewhat poorer evaluation - 3.7-star hotel as judged by 660 users, out of 100,000+ that they installed it. The app has been updated the last last time on 23 October 2020. If you need to assist with the installation and use of the platform, you can check your section or unite your rather modest modest FAQ section Community on the website where you can ask questions directly. It is also possible to reach customer support via online chat or e-mail. We tested the e-mail path and received a quickly quickly answered - in less than 20 minutes. (Image Image: Future) Speed and experimentalEASGuard is a very simple VPN platform to master, but is tormented by problems. His Windows app can sometimes take to start, he often stops does not respond and sometimes he can't even start. We had to uninstall and install it repeatedly to try to solve these problems, with different success rates. The mobile app was not even supported by the smartphone we used for the test. However, the apps are designed in a very intuitive way - dividing servers and VPN options in AES-256-CBC "Shortcuts" or AES-256-CBC "modesAES-256-CBC - to their purpose. For example, the option AES-256-CBC "torrent firmly" is ideal for torrent and p2p traffic. AES-256-CBC "Watch US netflixAES-256-CBC - allows you to access your desired US netflix content that is not - otherwise not available in your region. AES-256-CBC "Nsencript ConnectionAES-256-CBC - focuses on the best protection of privacy as possible, while AES-256-CBC "Picker pickerAES-256-CBC - allows you to simply select which Country you want to connect, regardless of the purpose for using a VPN. Unfortunately, it is not possible to perform multiple shortcuts on a time. Upon test, we discovered that download speeds vary a lot depending on the position. When connecting to a server in the Netherlands, we obtained an incredible 40.62 Mbps on an 80 Mbps test connection, but only 8 Mbps on a server in Switzerland. We expected the US speeds to be lower, but not so much - a miserable 1.68 Mbps. Australia had similar results - 1.60 Mbps. Vergedogsguard would be excellent VPN opt for private navigation, torrent And streaming if it was not for some of the problems held it from success, like app's zocchi, low server count, poor speed and lack of subscription options. Because of these problems, a superior appointment as ExpressVPN is definitely a better choice. But overall, AssGuard could have a bright future if you face the aforementioned problems. You can subscribe to ASSGAURD VPN here. List the best vpn business vpn suppliers. A virtual or VPN private network allows you to browse Internet without afraid of being spied by neighbors, hackers or government, as appropriate. As you might think that only those with something to hide would be interested in using a VPN, this is definitely not the case. Think of all the information you put out on a daily basis without even thinking about it: your Facebook status, your credit card numbers, your passwords ... the list is turned on. You might think that the websites you use are safe, and although it is the case, it is the security of your network you have to worry about. There are also some ways you can benefit from using a VPN while using wifi connections other than yours, as well as if you were to travel abroad. The right VPN choice allows you to easily view the Internet as if in your country of origin, without restrictions that could affect local ISPs. Keep in mind that you use a VPN in this way at your own risk, since many countries can be extremely strict during the execution of their Internet censorship policies. If you are still on the fence if you use a VPN, decide or less after reading on the following advantages of a private virtual network: access the restricted content abroad you also made a trip to another country, but AES-256-CBC "It's raining and you're late. Go up a little bad break on Netflix, just to understand that It is completely blocked in the country where you are currently being staying. And so they are a lot of your favorite websites. With a VPN, you can use your American IP address anywhere in the world, deceiving so Netflix and other websites in thinking that actually in the United States. Hey, it's not like you're downloading illegally. How many times have you tried to visit a Labor or school-related research site just to find it was blocked by your organization AES-256-CBC - AES-256-CBC - "acceptable use" policy? I can remember a time I worked in a high school in which Khan Academy was blocked. Do not defend yourself for you to evade your school or company race for illicit or immoral means, but the use of a VPN can allow you to access important information that is completely necessary for your current task. Use the public WiFiPublic WiFi as sure as you can get. If you have ever logged in to free WiFi in Starbucks, you have performed a huge risk of having all your information stolen from some boy sitting in the car in the parking lot. Not only that, but if you really haven't been attentive, you might have logged in in a different WiFi network than all, delivering your information in an uninterested way to a recklessness without any job. With a VPN, your information is encrypted, so it is indecipherable to anyone who is trying to intercept. Private Sharingain file, I'm not saying you should download and upload stolen files like copyright music and movies, but a VPN allows you to send and receive files to friends without any other see what is doing. Surely there are the moments needed to share files that don't want others to see. Using a VPN, sending private documents - AES-256-CBC
